KnE Digital Library Solutions
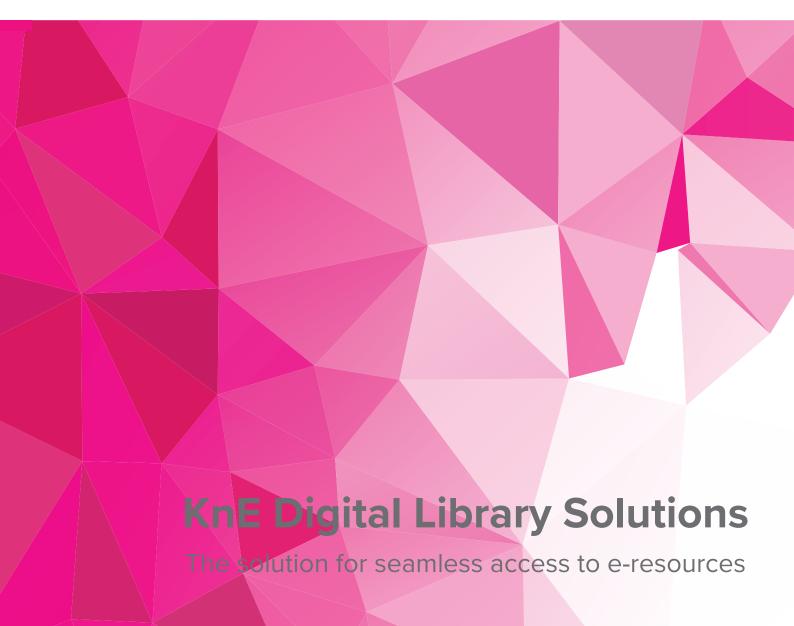

The solution for seamless access to e-resources

KnE Digital Library Solutions

At Knowledge E, we aim for a long-term, collaborative approach with our clients and see each project as a partnership. As part of the collaboration, we bring the latest technology and content of the highest quality to serve the institutions' evolving needs.

When an institution joins the collaboration with Knowledge E it is possible to make use of a single module to start, and then to flexibly evolve and make a more extended use of our capabilities over time. The KnE Digital Library platform is continuously being advanced based on input from the community. Institutions are contributing by providing feedback, enhancing existing functionality as well as suggesting new features and content.

The common characteristics of all modules is that each institution benefits from them as a service, with no need for internal IT-resources. The KnE Digital Library platform offers the following modules that all work seamlessly together:

Fully managed discovery service

Making Open Access content along with the institution's evolving subscribed e-resources searchable in one place.

Single Sign On (SSO) authentication

Including optional integration with the institution's Active Directory (or other local login server), to ensure a seamless access to all resources.

Advanced usage statistics

Both on the user behavior on the platform as well as Counter statistics automatically retrieved from the publishers.

Customisable library portal

To present and promote the e-resources, news, library staff and services.

Electronic library resources

Providing your users with relevant content of highest quality from the world's leading publishers.

Electronic Library Resources

World-class content:
Knowledge E represents and works with most of the world's top publishing houses and we do therefore support institutions, individually or in consortia, to identify and negotiate suitable subscriptions and one-time purchases.

Relevant and suitable:
Regardless of the requirements, or the size and type of budget, Knowledge E will find a suitable collection for your library. We collaborate closely with libraries to identify the most relevant publishers and electronic resources seen to their users' needs.

More than just content:
We do not stop at just providing access to the content, we also facilitate training and awareness sessions on the content provided and support any technical issues users might come across while using the resources.

Furthermore, to support the challenges faced by librarians these days, Knowledge E strives to empower your library through:

- ✔ Collection development support
- ✔ Usage statistics analysis
- ✔ Budget management
- ✔ Funding support

- ✔ Research management
- ✔ Research support
- ✔ Library promotion
- ✔ Training & technical support

We are also currently working on enabling access to our in-house CRM portal where our existing clients will be able to see their subscriptions and purchase history, requests trials and quotations as well as view payments and usage statistics.

Provide your users with relevant content of highest quality

What our clients say

" Knowledge E's eLibrary solution allows our users across the country to access critical medical information at the point of care. With over 200 medical sites spread across the Sultanate of Oman, covering thousands of doctors, nurses, and other health professionals, we needed this robust solution to empower our users to access a wealth of information at their fingertips and at critical moments for the patients' healthcare! "

Dr. Said Alghenaimi
elibrary Task Force Chairperson
Ministry of Health
Sultanate of Oman
