What You'll Learn

Learn the Basics of AI provides an introduction to using AI in the workplace to increase efficiency and productivity. This course includes applying the AI literacy framework, ethical considerations for using AI in professional work, and developing a plan to collaborate with AI on professional tasks. By the end of this course, learners will be able to:

- Define AI types and use an AI literacy framework in a university context.
- Communicate and apply ethical considerations for individuals using AI in a university context.
- Apply basic skills needed to collaborate with generative AI tools.
- Develop a plan to incorporate AI collaboration into professional tasks to increase efficiency and accuracy.
