

Dynamic insights for decisive strategy

Shape transformative research strategy and pursue
tomorrow's opportunities

University research leaders and managers are tasked with driving strategic, institution-wide research initiatives in a fast-changing global landscape. To succeed, they need clear, data-driven insights that cut through complexity and bring focus to their priorities.

Access to diverse, comprehensive information — from publications and citations to collaborations and funding — allows them to benchmark performance, spot emerging trends, and make confident, timely decisions.

Their goal is to maximize research impact, stay ahead of the competition, and position their institution for long-term success in an uncertain environment.

ELSEVIER

Advancing human progress together

“Today’s world is constantly creating more and more data and this is no different for higher education administration. Being able to coherently and consistently put together a story from these data is the difference between good decision making and poor decision making.”

Hansa Magee

Former Associate Director, Analytics Knowledge Enterprise, Arizona State University

Why SciVal?

SciVal provides unique insights for strategic research management by offering clear analytics that reveal important trends across publications, citations, collaborations, patents, policy, and funding data. It gives you multiple lenses into your institution, peer groups, and the broader global research landscape, offering customizable, reliable viewpoints to complement your trusted internal expertise.

Together with your internal data and expertise, SciVal enables you to shape transformative research strategies and position your institution for success in the evolving global research arena.

Research strategy

Harness vital data through multiple lenses — including publication and citation metrics, patent and policy citations, funding trends, and collaboration patterns — to surface insights that inform critical decisions and advance your institution’s strategic research goals.

Expertise and collaboration

Identify and assess current partners and potential collaborators by finding experts both within and beyond your institution.

Research funding

Access essential funding trends and analytics to:

- Identify leading funding bodies and researchers
- Explore high-investment research areas
- Connect funding success to research output
- Inform your strategy for impactful initiatives with these insights.

Impact and engagement

Showcase the broader impact of your research programs using critical data and metrics — including policy and patent citations — to drive impactful narratives and actions.
